

Acknowledgements

There are a number of people who were very involved in the creating of these lessons. Without their help, none of this would have been possible.

National Science Foundation

- This work was supported by the National Science Foundation’s Biocomplexity in the Environment Program, Grant #0120453.

Dr. Monica Mazurek – Rutgers University

- Dr. Mazurek coordinated the education outreach work on this Biocomplexity Project. She matched teachers to researchers and arranged for support resources. Dr. Mazurek also took on the responsibility of meeting with the group on a regular basis to help us through the process.

Dr. Lily Young – Rutgers University

- Dr. Young (co-PI on the Biocomplexity Grant) was kind enough to provide space and support in her lab. Everyone working in the lab was helpful and supportive of the project.

Dr. Gary Taghon – Rutgers University

- Dr. Taghon (co – PI on the Biocomplexity Grant) incorporated the teacher into the Biocomplexity meetings, allowing him the opportunity to confer with all of the members of the Biocomplexity “team”.

Dr. David Scala – Rutgers University

- As a member of the Biocomplexity “team”, Dr. Scala was able to offer insight into the research being conducted in the Biocomplexity program.

Authors

Jennifer Lamkie – Ms. Lamkie received her Bachelor of Science degree from The College of New Jersey (formerly Trenton State College) in Elementary Education / Biology. She received her Master's in the Arts of Education with a concentration in Instruction from Gratz College in Melrose Park, Pennsylvania. She is currently teaching at Thomas Jefferson Middle School in Edison, New Jersey. Ms. Lamkie has worked with resources at Rutgers University to bring cutting edge science into her classroom. She is also a member of the New Jersey Science Teachers Association.

Craig Phelps, Ph.D. Dr. Phelps is a research scientist / instructor in the Department of Environmental Sciences at Rutgers University. He received his Ph.D. at Rutgers and specializes in the study of bioremediation by anaerobic bacteria. He has taught General and Applied Microbiology and currently teaches Environmental Microbiology Lab and Introduction to Environmental Science. In addition, Craig is a member of the American Society for Microbiology and the New Jersey Science Teachers Association.
